Experience Vivident Mint Fresh Superior Oral Care and Long-lasting Freshness

Chlorhexidine Digluconate 0,2% + Aloe Vera + Peppermint Oil + Eucalyptus Oil **Vivident Mint Fresh Mouthwash** is an oromucosal solution based on chlorhexidine digluconate, enriched with *Aloe Vera*, peppermint oil and eucalyptus oil.

- Clinically tested, advanced antibacterial formula which offers superior protection against common oral health issues as it reduces bacteria and prevents the formation of dental plaque, gingivitis and alveolar osteitis.
- Ensures protection of the tooth surface from the formation of bacterial biofilm for up to 12 hours.
- Specially formulated to be gentle on the gums, while reducing inflammation, swelling and bleeding of the gums, promoting overall gum health.
- Provides long-lasting freshness, targeting the bacteria that cause bad breath.
- Formulated to minimize staining and provide a pleasant rinsing experience.

After 14 days of regular use, the great majority of clinical study participants confirmed that Vivident Mint Fresh Mouthwash:

- ✓ Intensively protects the gums and oral mucosa (95%)
- ✓ Ensures hygiene and comprehensive oral care (95%)
- ✓ Is suitable for people wearing dentures (95%)
- ✓ Provides long-lasting fresh breath ensuring long-lasting freshness (91%)
- ✓ Is pleasant for application and comfortable for use (91%)

Also, no adverse effects were observed during the regular application of **Vivident Mint Fresh Mouthwash**:

- ✓ No mucosal irritations or erosion
- \checkmark No edema, redness or burning sensation
- ✓ No hypersensitivity or discoloration of the teeth
- ✓ No taste disturbances during or after use
- ✓ No effect on the amount and quality of secreted saliva

Even 91% of participants confirmed their intention to buy this product.

*Tested on 22 subjects with sensitive and insensitive gums and teeth during 14 days under dentist supervision

IDEAL FOR:

- ✓ People with a high risk of gum disease
- \checkmark Post-operative dental care to prevent infection
- ✓ People with braces or other dental appliances
- ✓ Enhancing oral hygiene routine and freshening breath

THE SCIENCE BEHIND OUR INGREDIENTS:

Chlorhexidine digluconate is a bisbiguanide antiseptic and disinfectant which is bactericidal or bacteriostatic against a wide range of gram negative and gram positive vegetative bacteria, yeasts, dermatophyte fungi and lipophilic viruses. Because of its cationic nature, chlorhexidine digluconate binds strongly to skin, mucosa and other tissues which in turn makes it poorly absorbed across these membranes. After a single rinse, 30% may remain in saliva for up to 5 hours, and on the oral mucosa for up to 12 hours, with plasma levels being undetectable.

Chlorhexidine digluconate is a gold standard antiplaque agent which:

- Possesses strong antimicrobial activity against harmful bacteria present on teeth and gums
- Inhibits the formation of dental plaque and maintains good oral hygiene
- Helps to treat and prevent gingivitis
- Promotes gum healing following dental procedures
- Manages mouth ulcers, oral thrush and denture stomatitis

Aloe vera is known for its anti-inflammatory, antibacterial, antiviral, antiseptic and wound healing properties.

Results of a clinical study showed that Aloe vera mouthwash is effective in reducing periodontal indices. A significant reduction of gingival bleeding and plaque indices was demonstrated, with no side effects.

Peppermint oil is a good antiseptic, antibacterial and antiviral agent with light, clean and refreshing aroma. Peppermint oil makes the mouth feel fresh and the formula taste good, while exerting activity against common oral pathogens.

Eucalyptus oil has antibacterial and freshening properties. Several studies confirm the antimicrobial activity of eucalyptus oil against oral bacteria.

Instructions for Use:

1. After brushing your teeth, rinse your mouth with 15 mL (one tablespoon) of undiluted liquid

2. Swish the mouthwash around the entire mouth for 1 minute,

ensuring all areas of the mouth are covered.

- 3. Spit out the mouthwash; do not swallow.
- 4. Use the solution twice daily, once in the morning and once in the evening.
- 5. For best results, avoid eating or drinking for at least 30 minutes after use.
- \checkmark In the case of aphthous ulceration and oral candidal infections,
- treatment should be continued for 48 hours after clinical resolution.
- \checkmark Prior to dental surgery, rinse your mouth with 15 mL of solution for 1 minute.
- ✓ When treating gingivitis, a one month course is recommended.

✓ When tooth brushing is not possible due to postoperative pain, it is recommended that a 1-minute rinse is performed 3 times a day for 7 days or until sutures are removed and oral hygiene in the form of toothbrushing can resume.

Elevate Your Oral Care Routine Today!
