BURJA® White Glow Skin lightening cream is a unique combination of active principles in the form of a light, non-greasy texture that strongly acts on skin hyperpigmentation, reducing its visibility.

BURJA® White Glow Skin lightening cream improves the overall appearance of the skin, its colour and texture, and gives it a special glow, producing a complexion that is radiant and perfectly uniform. It is suitable for all skin types and doesn't cause irritation. Apart from the face, it can also be used on the neck, décolleté, the back of the hands and other parts of the body with hyperpigmentation. It works on all types of such occurrences, including age spots and blemishes, acne scars and other skin imperfections resulting from various inflammatory processes (post inflammatory hyperpigmentation).

The main active components in the product are innovative biomimetically encapsulated peptides for skin whitening that inhibit melanin synthesis, Japanese angelica root extract which disperses already formed melanin, and vitamin C originating from the extract of Kakadu plum fruit, which is one of the most effective substances in the fight against hyperpigmentation.

BURJA® White Glow Skin lightening cream:

- ✓ **Effectively evens out skin complexion**
- ✓ **Reduces the visibility of skin pigment stains**
- ✓ **Makes your skin incredibly radiant**
