Hyalovag Balance

Restores natural balance

7 inserts

EN

Hyalovag Balance inserts are formulated on the basis of sodium hyaluronate, a salt of hyaluronic acid, which, topically applied, quickly and effectively alleviates the feeling of vaginal dryness and contributes to maintaining the proper physiological level of hydration at the site of administration. Hyaluronic acid helps cells retain moisture, forming a natural film that keeps tissues adequately hydrated. Due to the fact that hyaluronic acid molecules have the potential to bind large amounts of water, up to 1000 times their weight, the level of hydration that can be achieved by topical application is quite significant.

Hyaluronic acid is a glycosaminoglycan that is naturally found in the body, in fact, it is produced by the body itself. However, the amount of hyaluronic acid in the body decreases with age, with this decrease becoming quite significantly after the age of 40.

In menopausal women, the lowered estrogen levels bring about vaginal atrophy which, among other things, is manifested by dryness, itching, burning, redness, and discomfort or pain during intercourse. However, even younger women may experience symptoms of vaginal dryness (eg. due to various hormonal balance disorders). In addition, chemotherapy, radiation, some medications, and even stress, can induce side effects like vaginal dryness.

The discomfort caused by these changes can be significantly alleviated by the effects of hyaluronic acid, which contributes to the normalization of moisture in the tissue and relieves symptoms caused by the dryness of the intimate region (vaginal dryness, burning, itching, minor injuries and discomfort or pain during intercourse). In the vaginal environment, hyaluronic acid forms a protective gel that instantly protects and moisturizes the mucous membrane and accelerates the natural process of its regeneration.

Hyalovag Balance inserts provide quick and long-lasting relief of symptoms of vaginal dryness by increasing the moisture and elasticity of the vaginal mucosa.

Instructions for use: Apply one insert locally, preferably in the evening before bedtime, in a horizontal position, for 7 to 14 days. After this period, apply one insert 2 - 3 times a week to maintain the improvement.

Notes: For external use only. Keep out of reach of children. It is not recommended for use by individuals hypersensitive to any of the ingredients found in the product.

Storage conditions: Store in a dry and dark place, at temperatures up to 25°C.

Shelf life: 3 years from the date of manufacture.
The manufacturing date is printed on the box.
